FAILURE to obey the above could result in death or serious injury.

This sign does not cover all dangers that could happen while using this eyewear device.

Please read “**Directions for Use**” before using this product.

Directions for Use

-We recommend using a sock style lanyard. Several popular brands/companies provide camouflage eyeglass lanyards. Simply attach these lanyards by sliding them over the temple tip or ear piece.

-When traveling to and from your hunting spot the Stealth Shades eyewear can be hung on a lanyard around the neck inside your hunting jacket or detached in a pocket.

-Once seated in your hunting spot, the Stealth Shades can be worn either inside or outside of a face mask, and used in conjunction with any type of hunting hat.

How STEALTH SHADES Work

Hunting situations that require the hunter to be in close proximity to wild game such as deer, turkey and coyote are very challenging. Many times these animals become spooked or tipped off when eye contact is made, even when hunters have made an attempt to blend into their surroundings with camouflage hats and masks. In any case, wild turkey can see a blinking eye at a great distance. Therefore, when hunting any wild game at close range it is important to conceal and camouflage one's eyes, as well as, one's body in its entirety.

The horizontal apertures allow an uninhibited field of view of game animals without these game animals seeing your eyes or eye movement. It works much the same as peering out of a dark closet into a lighted room. You can see everything without being seen. The vertical apertures are specially designed using hand held items such as hand calls.

Previous attempts at camouflage eyewear have seen limited success due to various drawbacks and limitations. Stealth Shades was designed with these drawbacks in mind.

Advantages

The Stealth Shades eyewear device includes, but is not limited to, the following advantages:

- Stealth Shades reduce glare and reflected light that can make viewing game difficult, especially when taking that perfect shot.
- Stealth Shades are a one-piece eyewear design that is made of a durable and flexible material which can withstand the rigors of hunting without getting damaged in the field like traditional sunglasses.
- Stealth Shades do not require any specialized care, cleaning instructions, or require a case to keep them from being damaged or lenses scratched.
- Stealth Shades cannot become fogged up like lensed eyewear, thus are able to be worn in conjunction with a facemask and hat.
- Stealth Shades will not impair your distance vision, however, it may improve it. Apertures have been used by competitive marksmen to improve their accuracy for many years.
- Stealth Shades perform well in all light conditions from low light near dusk and dawn, to bright mid-day sunlight and glare in snowy conditions.
- The wrap around feature of Stealth Shades allows for unencumbered peripheral vision.
- Stealth Shades are designed to accept popular tube or sock style lanyards.
